## How to Order When Combining Made-to-Order Specifications

How to order when combining two specifications: simple specials (XA□) and made-to-order common specifications (XB□, XC□).

■ How to Order Example: 1 (Enter the symbol in alphabetical order.)

CQ2B25 - 30D - **XA7B6**

Note) "X" of XB6 is not necessary.

● Made to Order

Symbol	Specifications
<b>XA7</b>	Change of rod end shape
<b>XB6</b>	Heat resistant cylinder

■ How to Order Example: 2 (Enter the symbol in numerical order when alphabetical letters are the same.)

CDQ2B25 - 30DZ - M9BW - **XC4C6**

Note) "X" of XC6 is not necessary.

● Made to Order

Symbol	Specifications
<b>XC4</b>	With heavy duty scraper
<b>XC6</b>	Made of stainless steel

\* When combining special order options, the symbols should be listed in alphabetical or numerical order. However, due to product-specific production restrictions, it may not be possible to easily combine them. Contact SMC if you require a custom combination.

# Made to Order Common Specifications: -XB5: Oversized Rod Cylinder

## 1 Oversized Rod Cylinder

Symbol  
**-XB5**

A cylinder that has been made stronger through the use of a piston rod with a larger diameter. It is used for long stroke applications that pose the risk of bending or buckling of the piston rod.  
(Please contact SMC if a lateral load must be applied to it.)

- Operate without lubrication from a pneumatic system lubricator.
- Please contact SMC for details on the maintenance intervals for this cylinder, which differ from those of the standard cylinder.
- In principle, it is impossible to make built-in magnet type and the one with auto switch. But, as for the one with auto switch, and the heat resistant cylinder with heat resistant auto switch, since it will be different depending on the series, please contact SMC.
- Piston speed is ranged from 50 to 500 mm/s. But, for MGQ□80, 100 and MGP□80, 100, it will be 50 to 400 mm/s. 50 to 200 mm/s for the MK series. The piston speed for the CY3B series is 50 to 400 mm/s.
- Please contact SMC for the CQ2, CQS, MGP and MGQ series with rubber bumper.
- As for the ambient temperature range of the CY3B series, since the magnetic holding force will be varied depending on the operating conditions, make sure that by referring to the next page.
- The ambient temperature range of the CY3B series is 50 to 150°C.
- Refer to the construction of the standard type for the details of the packing set for CJP2□6,10 and 16.

### CY3B series How to Order

CY3B  Bore size  Port thread type  - Stroke  -XB6

Heat resistant cylinder

### Specifications

Applicable size	CY3B
Bore size (mm)	ø6 to ø63
Ambient and fluid temperature	50 to 150°C*
Maximum operating pressure	0.5 MPa
Piston speed	50 to 400 mm/s*

\* When using in less than 100°C range, since it could make a difference in the maintenance cycle, depending on the operating speed, use it at 200 mm/s or less.

### Operating Pressure Limit for Intermediate Stop and Vertical Operation

Maximum operating pressure at the intermediate stop	0.4 MPa*
---	----------

\* Use caution that the magnet coupling will be removed, if it is used to stop in an intermediate stroke by an external stopper with the operating pressure over 0.4 MPa.

### Temperature Range for Operating Cylinder and Piston Speed

- When using with the operating temperature from 60 up to 100°C, and the piston speed of more than 200 mm/s, please consult with SMC separately.
- When using with the operating temperature from 50 up to 100°C, and the piston speed of less than 200 mm/s, XB6 specifications can be used.
- As for XB6, regarding the temperature range (over 50 to 60°C) which overlaps the one of standard products, consider the tendency of operating temperature (upper, lower limits), then choose a model.

When using with the operating temperature fluctuated between 50°C or less and 100°C or more, the operating speed, etc. will be largely restricted by the durability. Prior to use, please contact SMC.

### <Reference>

Maintenance cycle for XB6 could vary substantially, depending on the operating condition and the ambient temperature. Even if using in our recommended range, as a guide, conduct it in around 1/2 intervals, compared to the standard products.

### Warning Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

- Note 1) Operate without lubrication from a pneumatic system lubricator.
- Note 2) Use dry air which is suitable for heatless air dryer, etc. not to cause the moisture to be frozen.
- Note 3) Please contact SMC for details on the maintenance intervals for this cylinder, which differ from those of the standard cylinder.
- Note 4) Mounting auto switch is impossible.
- Note 5) Please contact SMC for the one with rubber bumper for CQ2, CQS.
- Note 6) No cushion type is adopted.  
Piston speed is ranged from 50 to 500 mm/s.
- Note 7) Refer to the construction of the standard type for the details of the packing set for CJP2□6,10 and 16.

# Made to Order Common Specifications: -XB19: High Speed Type

## 11 High Speed Type

Symbol  
**-XB19**

This is a high speed type of the dual rod cylinder CXS series.

The cylinder speed can reach a maximum of 1500 mm/s (1000 mm/s for  $\phi 25$  and  $\phi 32$ ) by enlarging the orifice diameter of the cylinder port. The allowable kinetic energy is approximately four times that of the standard type.

### XB20 (Stroke Adjustment Unit with Adjustment Bolt)

#### ⚠ Caution

##### <Stroke adjustment with adjusting bolt>

1. Loosen the lock nut for the adjustment bolt and adjust a stroke by rotating the adjustment bolt.

After adjusting the stroke, secure the adjustment bolt by tightening the lock nut.

If the effective stroke of the shock absorber is shortened by the stroke adjustment, its absorption capacity will be drastically reduced. Therefore, the adjustment bolt should be secured at a position where it projects about 0.5 mm farther than the shock absorber.

Tighten shock absorber holding bolts equally with the specified tightening torque.

#### Mounting

**Do not allow hands or fingers near the cylinder during its operation.**

If finger, etc. were to get caught between shock absorber and body, it might damage on the human body and the peripheral equipment. Take protective measures by mounting a protective cover, etc. as necessary.

**Basically, avoid bottom-mounting a cylinder.**

Mounting space is limited owing to the guide rod and the end plate, etc. Mount a cylinder by the top mounting or side mounting.

#### Adjustment

##### 1. How to adjust an adjustment screw (Stroke adjustment)

Loosen only the hexagon nut 1, then turn the adjustment screw to adjust the stroke. After adjusting, lock it with the hexagon nut 1. Fix it at the position ejected from the end plate, so that the end face of an adjustment screw could hit the bracket for stopper directly. (Refer to the figure right above.)

##### 2. How to replace shock absorbers

Loosen hexagon nut 2, and turn a shock absorber counterclockwise for removal. For installing a new shock absorber, fix it at the position that the end face of an adjustment screw sticks out by 0.5 mm from a shock absorber. (Refer to the figure on the right.) After adjusting the position of shock absorber, be sure to secure with hexagon nut 2.

\* Adjust it so that the end of an adjustment screw hit directly on the stopper bracket.

\* CA2□H (Air-hydro type) comes with a heavy duty scraper as standard.

### How to Order

\* For the MGP series, refer to page 1482.

### ⚠ Caution

Do not replace heavy duty scrapers.

- Since heavy duty scrapers are press-fit, do not replace the cover only, but rather the entire rod cover assembly. The CM2 series cannot replace either heavy duty scraper or rod seal. It goes for replacing retainer assembly for the CS1 series. Replace the CNA2 series with the lock unit.

### Precautions

#### ⚠ Warning

- When the cylinder is operating, if something gets caught between the stopper bracket for adjusting the stroke and the cylinder body, it could cause bodily injury or damage the peripheral equipment. Therefore, take preventive measures as necessary, such as installing a protective cover.
- To adjust the stroke, make sure to secure the wrench flats of the stopper bracket by a wrench, etc. before loosening the lock nut. If the lock nut is loosened without securing the stopper bracket, be aware that the area that joins the load to the piston rod or the area in which the piston rod is joined with the load side and the stopper bracket side could loosen first. It may cause an accident or malfunction.

Specifications other than above	Same as standard type	

### Precautions

#### ⚠ Caution

1. When air is supplied to the cylinder, if the stroke adjustment bolt is loosened in excess of the allowable stroke adjustment amount, be aware that the stroke adjustment bolt could fly out or air could be discharged, which could injure personnel or damage the peripheral equipment.

2. Adjust the stroke when the cylinder is not pressurized.  
If it is adjusted in the pressurized state, the seal of the adjustment section could become deformed, leading to air leakage.

## 23 Dual Stroke Cylinder/Single Rod Type

Symbol  
**-XC11**

Two cylinders can be integrated by connecting them in line, and the cylinder stroke can be controlled in two stages in both directions.  
Do not operate the CS1 series at twice the output.

### Precautions

#### ⚠ Caution

- Do not supply air until the cylinder is fixed with the attached bolt.
- If air is supplied without securing the cylinder, the cylinder could lurch, posing the risk of bodily injury or damage to the peripheral equipment.

### Functional description of dual stroke cylinder

### Stroke A or stroke B operation can be made individually.

### Double output is possible.

### Precautions

#### ⚠ Caution

1. Remove the temporary fixing nut and flat washer from the mounting bolt, and secure the cylinder properly with the mounting bolt.
2. Although the cylinder can be detached by removing the nut, do not detach it for purposes other than replacing the seal.
3. The removed nut and flat washer are not used to secure the body.

Description	Dealing with the stroke in 1 mm increments by changing a collar of the standard stroke cylinder. Minimum manufacturable stroke ø16 to ø63: 15 mm ø80, ø100: 20 mm Select a rubber bumper type, because the cushion effect is not obtainable for less than this stroke.	
Part no.	Suffix "-XC19" to the end of standard part number.	
Applicable stroke (mm)	ø16	15 to 249
	ø20 to ø63	15 to 399
	ø80, ø100	20 to 399
Example	Part no. MGPM20-35AZ-XC19 15 mm width collar is installed in MGPM20-50AZ. C dimension is 112 mm.	

(Note) Intermediate strokes (in 1 mm increments) with a special body are available by made-to-order.

### Specifications

Seal material	Fluororubber
Ambient temperature range	With auto switch : -10 to 60°C (0°C to 60°C for CS1, CS2 series) (No freezing) Without auto switch : -10 to 70°C (0°C to 70°C for CS1, CS2 series)
Specifications other than above and external dimensions	Same as standard type for each series

Note 1) Please confirm with SMC, as the type of chemical and the operating temperature may not allow the use of this product.

Note 2) Cylinders with auto switches can also be produced; however, auto switch related parts (auto switch units, mounting brackets, built-in magnets) are the same as standard products. Before using these, please contact SMC regarding their suitability for the operating environment.

Note 3) The MGG series is using a shock absorber RBL type.

Note 4) No cushion is equipped for N type. Piston speed is ranged from 50 to 500 mm/s.

Note 5) The MGP and MGQ series are without a cushion. Confirm the kinetic energy.

Note 6) Refer to the construction of the standard type for the details of the packing set for CJP2□6,10 and 16.

### Specifications

Piston speed	50 to 1000 mm/s
Additional specifications	Same as standard type

\* On the axial foot and head side flange types, the bracket is mounted at the time of shipment. Others are shipped together (but not assembled).

### Construction/Dimensions (Other dimensions are the same as CG1 long stroke cylinder.)

The shock absorber service life is different from that of the CG1 cylinder. Refer to the RB series Specific Product Precautions for the replacement period.

(mm)					
Bore (mm)	Stroke range	Shock absorber	S	MH	ZZ
20	10 to 350	RBAC0806	77	23.5	135.5
25	10 to 400	RBAC1007	77	31	148

63	25 to 1200	RBAC2725	102	92.5	252.5

\* Shock absorbers are consumables.

The specifications for shock absorbers are the same as RBC□□□□, but use RBAC□□□□ when an external pressure is applied such as for a built-in cylinder.

The maximum absorption energy may decrease depending on the operating conditions.

## 47 Rodless Cylinder with Floating Joint

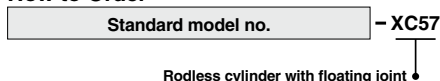

Symbol  
**-XC57**

A special floating joint has been added to the CY3B series, which reduces the amount of labor that is required for connecting the cylinder to the guide of another shaft (load side).  
The bolts used for joining the floating joint to the load can be secured either from above or below. (CY1B with a  $\phi 6$  or  $\phi 10$  bore must be secured from above.)

Note 1) With dimension F<sup>2</sup>, the amount of clearance between the body and the floating joint is 1 mm. The self weight deflection of the cylinder tube is not taken into account. Before operating the cylinder, determine the proper value by taking the amount of self weight deflection and the amount of off-centering from the other shaft into consideration.

Note 2) When the bolts are secured from above, be aware that if the cylinder is operated when dimension R (on  $\phi 6$  and  $\phi 10$ , 3 mm or over) is exceeded, the end of the bolt could come in contact with the body, without being able to achieve the floating effect.

Maximum energy absorption (J)	58.8	147
Stroke adjustment range (mm)	0 to -25	0 to -30
Piston speed	Refer to the graph below.	

Soft type RJ series type (-XB22) is also available.  
For details, refer to -XB22.

### Allowable Kinetic Energy

Load mass and cylinder speed should be observed within the range given in the graph below.

Stroke retracted side (Rubber bumper)

Stroke extended side (Shock absorber)

The shock absorber service life is different from that of the MGP cylinder. Refer to the RB series Specific Product Precautions for the replacement period.

### Mounting

**Do not allow hands or fingers near the cylinder during its operation.**

If finger, etc. were to get caught between shock absorber and body, it might damage on the human body and the peripheral equipment. Take protective measures by mounting a protective cover, etc. as necessary.

**Basically, avoid bottom-mounting a cylinder.**

Mounting space is limited owing to the guide rod and the end plate, etc. Mount a cylinder by the top mounting or side mounting.

### Adjustment

#### 1. How to adjust an adjustment screw (Stroke adjustment)

Loosen only the hexagon nut 1, then turn the adjustment screw to adjust the stroke. After adjusting, lock it with the hexagon nut 1. Fix it at the position ejected from the end plate, so that the end face of an adjustment screw could hit the bracket for stopper directly. (Refer to the figure right above.)

#### 2. How to replace shock absorbers

Loosen hexagon nut 2, and turn a shock absorber counterclockwise for removal. After installing a new shock absorber, fix it at the position that the end face of an adjustment screw sticks out by 0.5 mm from a shock absorber. (Refer to the figure on the right.) After adjusting the position of shock absorber, be sure to secure with hexagon nut 2.

Grease	Grease for food
Auto switch	Mountable
Dimensions	Same as standard model
Specifications other than above	Same as standard model

### Warning Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

<Not installable>

Food zone.....An environment where food which will be sold as merchandize, directly touches the cylinder's components.

Splash zone.....An environment where food which will not be sold as merchandize, directly touches the cylinder's components.

<Installable>

Non-food zone.....An environment where there is no contact with food.

- Note 1) Avoid using this product in the food zone. (Refer to the figure above.)  
 Note 2) When the product is used in an area of liquid splash, or a water resistant function is required for the product, please consult SMC.  
 Note 3) Operate without lubrication from a pneumatic system lubricator.  
 Note 4) Use the following grease pack for the maintenance work.  
 GR-H-010 (Grease: 10 g)  
 Note 5) Please contact SMC for details on the maintenance intervals for this cylinder, which differ from those of the standard cylinder.

Piston rods are heat treated. Even when an external force exceeding the specification range acts temporarily on the piston rod in the locked state, it is resistant to damage and an unlocking failure is unlikely to occur.

# Made to Order Common Specifications -XC102: Lock Release Specification

## 67 Lock Release Specification

Symbol  
**-XC102**

·Prevents lever damage when a transferred workpiece moves backward  
(Prevents damage by releasing the locked lever when a pallet suddenly moves backward and collides with the lever)

The lever is in the locked state when the lock pin is hooked on the bracket assembly.

When a workpiece moves backward and collides with the lever, the lock pin unhooks from the bracket assembly as the lever is pushed backward.

When the lock pin is unhooked from the bracket assembly, the lever becomes unlocked, which allows the workpiece to pass through.
