Model with Residual Pressure Release Function

Speed Controller with Pilot Check Valve

A stainless steel type (ASP-G series) has been added. For secondary battery manufacturing processes

Push-lock Type

RoHS

Cylinder pressure can be manually released.

Variations

Applicable tubing O.D. Universal Port size Pilot port size Metal material Metric size Valve side M5, 10-32UNF Horizonta Brass 4, 6, 8, 10, 12 4, 6, 8, 10, 12 Stainless steel Cvlinder side 1/8, 1/4, 3/8, 1/2 (R, NPT, G) Pilot port Valve side M5, 10-32UNF Vertical 4, 6, 8, 10, 12 4, 6, 8, 10, 12 Brass Pilot port 1/8, 1/4, 3/8, 1/2 (G) Cylinder side

Model without Residual Pressure Release Function

Temporary intermediate stops are possible.*1

*1 Precise intermediate stops are not guaranteed.

ASP Series

Horizontal and vertical types are available, which can be selected depending on the installation conditions.

Metal material: Brass/Stainless steel

For the stainless steel type, copper (Cu) and zinc (Zn) are not used as main components in the metal materials.

A Caution

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For flow control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC

website: https://www.smcworld.com

Specifications

Fluid	Air
Proof pressure	1.05 MPa
Max. operating pressure	0.7 MPa
Min. operating pressure	0.1 MPa
Pilot check valve operating pressure	50% or more of the cylinder supply pressure {0.1 (0.15*1) MPa or more}
Ambient and fluid temperatures	–5 to 60°C (No freezing)
Applicable tubing material	Nylon, Soft nylon, Polyurethane, FEP, PFA*2

*1 The value in brackets is for the AKP-D-M5/U10.

*2 Use caution at the max. operating pressure when using soft nylon or polyurethane tubing. (Refer to the Web Catalog for details.)

Specifications

Fluid	Air
Proof pressure	1.05 MPa
Max. operating pressure	0.7 MPa
Min. operating pressure	0.1 MPa
Pilot check valve operating pressure	50% or more of the cylinder supply pressure $\{0.1 \ (0.15^{*1}) \text{ MPa or more}\}$
Ambient and fluid temperatures	-5 to 60°C (No freezing)
Applicable tubing material	Nylon, Soft nylon, Polyurethane, FEP, PFA*2

*1 The value in brackets is for the AKP-D-M5/U10.

*2 Use caution at the max. operating pressure when using soft nylon or polyurethane tubing. (Refer to the **Web Catalog** for details.)

ASP Series Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For flow control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

Design

A Warning

1. Confirm the specifications.

The products in this catalog are designed to be used in compressed air systems (including vacuum) only.

Do not operate at pressures, temperatures, etc., beyond the range of specifications, as this can cause damage or malfunction. (Refer to the specifications.)

Please contact SMC when using a fluid other than compressed air (including vacuum).

We do not guarantee against any damage if the product is used outside of the specification range.

- 2. Do not disassemble the product or make any modifications, including additional machining. Doing so may cause human injury and/or an accident.
- 3. Sonic conductance (C) and critical pressure ratio (b) values for products are representative values.
- 4. Check if PTFE can be used in the application. PTFE powder (Polytetrafluoroethylene resin) is included in the seal material of the male thread type piping taper thread. Confirm that the use of it will not cause any adverse effects on the system.

Please contact SMC if the Safety Data Sheet (SDS) is required.

5. The pilot check valve is a product aimed at the control of the actuator via a temporary intermediate stop. The pilot check valve is used for temporarily stopping the

The pilot check valve is used for temporarily stopping the actuator. Until a pilot signal is input, the valve shuts off the flow path from 2 to 1 and the actuator stops. When a pilot signal is input, the flow path from 2 to 1 is opened. When the residual pressure exhaust button is operated, all flow paths (2 to 1, 21, and exhaust port) are opened.

Residual pressure exhaust button (ø2.9) Exhaust port

6. This product cannot be used for accurate and precise intermediate stops of the actuator.

Due to the compressibility of air as a fluid, the actuator will continue to move until it reaches a position of pressure balance, even though the pilot check valve closes with an intermediate stop signal. 7. This product cannot be used to hold a stop position for an extended period of time.

Pilot check valves and actuators are not guaranteed for zero air leakage. Therefore, it is sometimes not possible to hold a stop position for an extended period of time. In the event that holding for an extended time is necessary, a mechanical means for holding should be devised.

8. Pay attention to the residual pressure within the actuator at the time of intermediate stop.

When the actuator is stopped at the intermediate position by this product, there may be pressure contained inside the actuator, therefore the actuator may suddenly move when the residual pressure is released. Before operating the residual pressure exhaust button, confirm that the surrounding area is secure from any potential hazards or accidents occurring.

9. Use this product after checking the surrounding areas in advance before the release of residual pressure.

The actuator may move at a speed quicker than the intended speed from the original circuit set up when exhausting from the residual pressure release. Confirm this speed will not create additional hazards and pay attention to the air discharged from the exhaust port.

10. Pay attention to the motion of the actuator at the time of release of the residual pressure.

When operating the residual pressure exhaust button or conducting maintenance or inspection, the actuator may start moving due to the residual pressure. Take appropriate measures in advance to prevent an actuator movement from posing a hazard.

Also pay attention to the operation speed and the movement of the cylinder during exhaust.

When an exhaust center valve is used on the actuator supply side (Figure A below), the residual pressure is released from port 1, 21, and the exhaust port. However, when using a closed center valve like the example shown in Figure B below, air is discharged only from port 21 and the exhaust port.

For the moving direction of the actuator against the corresponding exhaust side, refer to the figure below.

Figure A: Example of piping using exhaust center valve

* Use the model "ASP-□-M5" or "ASP-□-U10" in a circuit that uses an exhaust center valve.

ASP Series Specific Product Precautions 2

Design

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For flow control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

\land Warning

Figure B: Example of piping using closed center valve (Recommended example)

* The model "ASP-D-M5" or "ASP-D-U10" cannot be used in a circuit that uses a closed center valve only. If you want to use that model with a closed center valve only, contact us.

11. Push the residual pressure exhaust button all the way to the end position by using a tool.

Push the residual pressure exhaust button all the way to the end position by using a tool having a tip diameter of ø2.8 or below. Refer to the table below for operating force and depth. Note that the higher the residual pressure, the greater the force required to operate the residual pressure exhaust button.

Model	Operating force [N] (Reference value)	Operating depth [mm]
ASP-□-M5/U10	5.3 to 8.2	3.5
ASP-□-□01	5.1 to 11.9	3.9
ASP-□-□02	6.7 to 19.5	3.8
ASP-□-□03	10.6 to 34.4	4.7
ASP-□-□04	17.1 to 54.4	5.8

12. After operating the residual pressure exhaust button, confirm that the button has returned to the normal position.

Make sure that the residual pressure exhaust button has returned to the end face of the product before operating again. If the button cannot return to the normal position, the intermediate stop function of the actuator will not work. Therefore, replace the product with a new one.

13. Pay attention to the motion of the actuator at the time of restart after the release of residual pressure.

When restarting the product after releasing the residual pressure, check the initial driving direction, confirm that the work area is secured, and then restart the product. Failure to follow this instruction may cause the actuator to suddenly move.

14. When the product is used in a balance control circuit, the check valve may not be released even when the pilot pressure is 50% of the operating pressure. In this case, obtain the pilot pressure from a position so that the pilot pressure is equivalent to the operating pressure.

When using the product at the minimum operating pressure, set the pilot pressure to 0.1 MPa or higher. However, for "ASP- \Box -M5" or "ASP- \Box -U10," set the pilot pressure to 0.15 MPa or higher.

15. As a reference, we have confirmed through our durability tests that the check valve has a durability against 10 million cycles of ON and OFF operations and the residual pressure exhaust button has a durability against 10,000 cycles of operation at the maximum operating pressure.

However, note that the tests were conducted under limited conditions.

- 16. In the following cases, malfunctioning or noise due to oscillation may occur.
 - When the differential pressure between the port 1 side and port 2 side is smaller than the min. operating pressure
 - When the IN side piping of the product or the effective area of the directional control valve is smaller than that of the product
 - \cdot When the pressure drop on the port 1 side is slower than that of the port 2 side during operation of the product
 - When the supply pressure at the port 21 is reduced (Refer to the piping diagram below.)
 - \cdot When the port 1 side piping (tube) is bent or crushed

ASP Series Specific Product Precautions 3

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For flow control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

Mounting

A Warning

1. Operation manual

Install the product and operate it only after reading the operation manual carefully and understanding its contents. Also, keep the manual where it can be referred to as necessary.

- **2. Ensure sufficient space for maintenance activities.** When installing the products, allow access for maintenance and inspection.
- 3. Tighten threads with the proper tightening torque.

When installing the products, follow the listed torque specifications.

- 4. Screw the R screw into the Rc thread, the NPT screw into the NPT thread and the G screw into the G thread.
- 5. Mount after confirming the piping direction.

Connect the IN side to the directional control valve and OUT side to the actuator.

6. Do not apply excessive force or shock to the fittings or other parts of the product with tools.

Doing so may result in damage or air leakage. When connecting piping, use a tube of sufficient length. When binding the piping together with a tying band, etc., be sure that external force is not being applied to the piping.

- 7. For handling One-touch fittings, refer to the "Fittings and Tubing Precautions" in the "Handling Precautions for SMC Products."
- 8. Pay attention to the method of mounting on the cylinder.

For the horizontal type, a hexagon wrench needs to be used. The product cannot be mounted with an open-end wrench. For the mounting of the vertical type, an open-end wrench needs to be used. Note that the mounting method differs between the vertical type and horizontal type.

9. Conduct mounting and removal of the vertical type by holding the width across flats of the body B and turning it by using an appropriate wrench.

Do not apply torque at other points, as the product may be damaged. Rotate body A manually for positioning after installation.

10. To install and remove the horizontal type product with hexagonal hole, use an appropriate hex key and push it into the hexagon hole of the stud.

Do not apply torque at other points, as the product may be damaged. Rotate the end body manually for positioning after installation. Refer to the applicable dimension of the hexagon wrench.

Connection thread	Hexagon wrench (Norr	ninal width across flats)
size	Metric size	Inch size
M5, 10-32UNF	2.5	—
R1/8, G1/8	6	—
NPT1/8	_	7/32"
R1/4, G1/4	8	—
NPT1/4	_	5/16"
R3/8, G3/8	10	—
NPT3/8	_	3/8"
R1/2, G1/2	10	—
NPT1/2	_	3/8"

11. Do not use this product in the operating condition where moment loads will be constantly applied to the product.

The fitting section and the product may be damaged.

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)^{*1}, and other safety regulations.

- Caution: indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

AWarning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
- An application which could have negative effects on people, property, or animals requiring special safety analysis.
- 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

- *1) ISO 4414: Pneumatic fluid power General rules relating to systems.
 - ISO 4413: Hydraulic fluid power General rules relating to systems. IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
 - ISO 10218-1: Manipulating industrial robots Safety. etc.

 The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand

and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

Limited warranty and Disclaimer

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

A Safety Instructions Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
