

Water Resistant Cylinder (Pneumatic/Hydraulic)

Pneumatic: CM2/CG1/MB/MB1/CQ2/CA2/MGP/MGG/MK/RSQ Series

Hydraulic: CHDKB/CH2F Series

Compatible with an operating environment with coolants.

Anti-coolant performance has been improved compared to the standard cylinders.

Applicable for an operating environment where water splashes.

Water Resistant Air Cylinders (Pneumatic/Hydraulic)

Suitable for using under the atmosphere having coolant in the machine tools.

Also, compatible with environments where water is splashed on the food machinery, or car washing machines, etc

Special scraper

- Dramatically improved water resistance compared to standard cylinders

Conditions

Operating conditions..... Air
 Pressure 0.5 MPa
 Coolant Water-soluble
 Piston speed 200 mm/sec
 Operating cycle 60 cpm

- Two types of standard seal material

Nitrile rubbers (NBR)
 Fluororubbers (FKM)

Mounting brackets, accessories, and nut material: Stainless steel

The following accessories need to be prepared separately. (Please order separately.)
 Refer to the "Accessories" page of each series for details.

Water Resistant Air Cylinder/Water Resistant Hydraulic Cylinder

Specific Product Precautions

Be sure to read this before handling the products. Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

Handling Precautions

1. Before installing a cylinder, thoroughly flush out the piping to prevent dust or cutting chips from entering the cylinder. For the hydraulic cylinder, use the air bleed valve to bleed the air inside the cylinder.
2. Eccentric loads applied to the piston rod dramatically shorten the service life. Use the piston rod by always applying a load in an axial direction.
3. Make sure not to scratch or gouge the sliding portion of the piston rod, as this could damage the seals and lead to leaks. Attach a cover or other protection in locations where the cylinder is exposed to grinding sludge or machining chips.
4. When the cylinder is used in a place where the liquid from the piston rod is lightly splashed, and exposed to dust or sand, use a heavy duty scraper (-XC4).
5. If there is a possibility that liquid splashes on cylinder fittings when using an air cylinder, use insert fittings, self-align fittings, piping, etc. Consider the compatibility of liquid components and piping materials before using.
6. When selecting seals, generally use NBR (nitrile rubber) seals with liquids that do not contain chlorine and sulfur, and use FKM (fluororubber) seals with liquids that contain chlorine and sulfur. However, depending on the type and the brand of liquid that splashes on the cylinder, the operating life of seals may be reduced dramatically (such as coolant liquid). In cases where special additives are used, or where liquid caused trouble with the current nitrile or fluororubber seals in the past, request an investigation or set up a test period for the use of the seals.

Examples of coolants

- | | | |
|----------------------|---------------------------------------|-------------|
| Shimiron, PA-O-5 | (Daido Chemical Industry Co., Ltd.) | (NBR seals) |
| Noritake Cool, AFG-S | (Noritake Co., Ltd.) | (NBR seals) |
| Yushiroken, S-46S | (Yushiro Chemical Industry Co., Ltd.) | (NBR seals) |
| Yushiroken, EC-50-T3 | (Yushiro Chemical Industry Co., Ltd.) | (NBR seals) |
| Yushiron Oil, No. 23 | (Yushiro Chemical Industry Co., Ltd.) | (FKM seals) |
| Daphne Cut, Hs-1 | (Idemitsu Kosan Co., Ltd.) | (FKM seals) |
7. Please consult with SMC separately when liquid contains sulfur, which is used for cylinders with a guide (MGP, MGG).
